Allaguly Ahmedov

Senior Platform / Backend Engineer (Go)

4+ years of commercial software development · Kazan, Russia

aallaguly01@gmail.com · aallaguly01.github.io · GitHub · LinkedIn · Telegram

SUMMARY

Backend / Platform engineer with 4+ years of commercial development. I build an internal platform for product teams: Go service templates, shared libraries, self-service deployment to Kubernetes and reliability standards. Maintained 650+ production integrations under a 4-hour SLA and introduced Prometheus and Grafana monitoring. Led Go projects end to end, from requirements to customer handover.

SKILLS

Languages	Go, SQL, Bash; previously Java, PHP
Go	runtime and scheduler, memory model, concurrency, pprof, log/slog, graceful shutdown
Backend	REST, gRPC, SOAP/XML, PostgreSQL, Redis, caching, retries and timeouts
Infrastructure	Linux, Docker, Docker Compose, Kubernetes, Helm, Gateway API
CI/CD	GitHub Actions, GHCR, golangci-lint, govulncheck, Trivy
Observability	Prometheus, Grafana, alerting, runbooks
Practices	unit and integration testing, code review, mentoring, onboarding

EXPERIENCE

EPLEX — Backend / Platform Engineer (Go) — Kazan · Dec 2025 — present

- Design the architecture of Go services, API contracts and the scaling strategy for growing load.
- Develop an internal platform for product teams: a Go service template with built-in logging, metrics, health checks and graceful shutdown, so new services start from a golden path instead of from scratch.
- Write shared Go libraries for the platform: configuration, clients with timeouts and retries, middleware, metrics instrumentation.
- Standardize delivery: reusable CI/CD pipelines and Helm charts that let teams deploy to Kubernetes on their own.
- Set reliability standards: SLOs and alerts on RED metrics, runbooks, incident reviews in postmortem format.

Ybady H.J — Go Backend Developer — Ashgabat, Turkmenistan · May 2023 — Dec 2025

- Built Go backends for custom products: a taxi service, a freight platform connecting shippers and carriers, and a restaurant management system.
- Contributed to a GPT-based assistant for the Turkmen language.
- Ran projects through the full cycle: requirements and specification, architecture, development, deployment and handover.
- Designed Go services for high load: concurrent request handling, caching, timeouts and graceful shutdown.

EPLEX — Backend Developer — Kazan · Sep 2022 — May 2023

- Built 100+ supplier integrations over REST/JSON, SOAP/XML and reverse-engineered APIs: authentication, search, cart, orders, caching and retries.
- Created a template service that cut integration time for suppliers on the same platform from 1–2 days to 1 hour.
- Maintained 650+ production integrations under a 4-hour SLA; introduced Prometheus and Grafana for early detection of external API failures.
- Improved engineering practices: unit and integration testing, code review; took part in onboarding and mentoring.
- Stack: Java, PHP, PostgreSQL, Redis, Docker, Kubernetes, Prometheus, Grafana.

EDUCATION AND LANGUAGES

Kazan Federal University, Higher Institute of ITIS — Bachelor's degree, Software Engineering, 2025.

Languages: Russian — fluent, English — conversational.
